Summary

Full Stack Engineer with 2+ years of experience building high-performance web applications with a strong focus on frontend experience, real-time systems, and scalable backend architecture. Proven track record in optimizing complex UIs, handling large datasets, and designing responsive, production-grade applications.

Skills

- **Frontend:** React.js, Next.js, Redux, React Query, Tailwind CSS, Framer Motion
- **Backend:** Node.js, Express.js, Python, Django, DRF
- **Databases & Systems:** PostgreSQL, MongoDB, Prisma, Redis
- **Core Concepts:** REST APIs, WebSockets, Event-driven architecture, Pub/Sub, Async processing, Caching, RBAC
- **Tools:** Docker, Git, GitHub

Experience

Software Engineer — Visnext Software Solutions

June 2024 – Present

- Optimized a complex Kanban-based UI system handling multiple boards, projects, and large ticket datasets, achieving ~35% performance improvement and smooth user experience under concurrent usage.
- Designed and implemented batch update mechanisms for ticket operations, significantly reducing UI lag and backend load.
- Built highly responsive and scalable frontend interfaces using React, focusing on performance, state management, and seamless UX.
- Developed and optimized REST APIs used across multiple clients, improving response times and reliability.
- Implemented real-time updates via WebSockets, enabling instant UI synchronization across users.
- Improved database performance by restructuring queries and optimizing data access patterns for large datasets.
- Worked in a legacy, high-volume ticketing system, handling rapid iterations and complex feature updates.

React Developer — Newsbundle

Oct 2023 – June 2024

- Delivered high-performance frontend applications, achieving 30% faster load times and 25% reduction in runtime errors.
- Built scalable UI components interacting with distributed backend services.
- Improved user experience through optimized data fetching, caching, and state management strategies.
- Contributed to debugging and stabilizing production systems in fast-paced environments.

Projects

Real-Time Collaboration & Activity Engine

- Built a full-stack system enabling real-time collaboration across shared workspaces using Node.js, Redis Pub/Sub, and WebSockets.
- Designed an event-driven architecture to handle activity streams (create, update, delete actions) with scalable message propagation.
- Implemented batch processing for high-frequency updates, reducing server load and improving UI responsiveness.
- Developed a Next.js dashboard with live updates, optimized rendering, and efficient state synchronization.
- Optimized backend queries and caching strategies to handle large datasets and concurrent users efficiently.

AI GitHub Assistant

- Developed a full-stack application integrating GitHub APIs for automated repository management.
- Built responsive frontend using Next.js with strong focus on UX and performance.
- Designed backend workflows for handling structured and asynchronous operations.

Taskify — Project Management System

- Built a Kanban-style project management tool with authentication and role-based workflows.
- Implemented optimized frontend architecture with efficient state management and caching.

Education

Bachelor of Computer Science

University of Central Punjab

Leadership

- Led a cross-functional team of 3–4 developers at Visnext, coordinating task distribution, conducting code reviews, and driving sprint deliverables — enabling on-time delivery of the Kanban management system with measurable performance gains.

Certifications

- Front-End Development (Coursera)
- HTML, CSS, JavaScript
- UX Design Foundations
